

Product Name :
Injector for 80 Needle Ampoules

Product Code :
UAEIJC0003

Description :

Injector for 80 Needle Ampoules

Technical Specification :

The circulation system with double filtration of the working fluid – to protect the needles from clogging,
The system of blowing the needles with compressed air without removing the needles – to protect the needles from clogging,
A convenient system of fast (no more than a minute) installation and dismantling of needles,
Adjustable conveyor step from 5mm! to increase the maximum yield of the finished semi-finished product by increasing the number of punctures,
No guide needle guides. This significantly reduced the load on the equipment rails,
The pneumatic valve, which disconnects the supply of working fluid for its economical use and minimal contamination,
Robust construction in stainless steel,
Centrifugal pump in stainless steel with high capacity, which allowed to stabilize the pressure during a long injection – the pressure does not fall!
Smooth electronic adjustment of the number of measures from 5 to 120! cycles per minute.
Double, in comparison with standard machines, performance, due to lower idling of the frame.
Double reliability of the movement mechanism of the frame due to less idling.
Smooth electronic pressure adjustment from 0.3 to 2.8atm.
Easy washing and cleaning equipment.
Highest hygiene.
