Product Name :

Block Clamp

Product Code :

EQUP-UE-BTH008

Description :

Block Clamp

Technical Specification :

The clamp is a forklift attachment that includes a frame, an arm connected to the frame and a cylinder connected to the arm. Holding arm includes left and right arms. One end of the cylinder is hinged with the left arm, and the other end of the cylinder is hinged with the right arm. The left arm and the right arm are controlled to open and close by the oil cylinder. At least one first limit hole is arranged on the left of the hinge point on the first connector, and the second connector is provided with at least one first limiting hole on the right of the hinge point. The first limiting hole is inserted with a first limiting component for limiting the closing angle of the left arm and the right arm, which so as to limit the minimum clamp angle of the clamp and prevent the collision of the left arm and the right arm. There is a first limit hole in the holding clamp, which can limit the closing angle of the left arm and the right arm so as to limit the minimum clamping angle of the clamp and prevent the collision of the left and the right arm. Then it can clamp smaller objects. The structure is simple, easy to operate, and has strong practicality.

Customized size and specification as per your drawing or sample. We Block Clamp suppliers UAE Dubai, can make the Block Clamp as per your request, specification, size and bulk quality Dubai.
